About Me

Programming	:	NodeJS, Java, PHP, C#.
Web/Frameworks	:	JavaScript, Typescript, Angular, React, Express, HTML/CSS.
Databases	:	MySQL, PLSQL, MongoDB, DynamoDB.
Tools	:	Git, Jira, AWS, Photoshop, Premiere Pro

Experience

Frontend Developer - **Seek Business Capital** – (Los Angeles, CA)   July 2018 - Present
- Decreased the drop of rate of users by 35% on the landing page by converting it into a more user interactive and user-friendly multi-step form which helped improve the contact rate in turn increasing sales by 5-10%.
- Built APIs on AWS Lambda serverless functions for vendors and partners via AWS API Gateway to get access to data for tracking the customers journey in the funding cycle.
- Developed a multi-themed and multi-domain application on Angular framework which helped localizing all the different web pages and spinning up a new landing page in seconds via a custom-built headless CMS.
- Successfully A/B tested the usability flows for user interactivity and interface designs based on insights from google analytics and heatmaps of the website.

Full Stack Developer - **INSZoom** – (Pleasanton, CA)   October 2017 – June 2018
- Designed and integrated a third-party service 'Duo Security' for two-factor authentication to improve the security of the product which helped in marketing the product and gaining more customers.
- Worked towards implementing new modules for clients by owning responsibility of designing and executing it.
- Interacted with the client facing team to resolve issues with managing the ticketing system on resolving bugs and other issues raised by clients on production.

Web Developer - **Library Technologies** – (Wichita, KS)   February 2017 – June 2017
- Designed a system which helped library staff to gain insights on the statistical data from which they could decide on where to spend more money on resources and better aid the students and faculty of the university.
- Developed a web application on Angular PHP with MySQL database and used google graphs API for statistical presentation of data.
- A continuous feed of live data from various software's used in library was captured and fed into the application to derive the usage of different resources such as printers, books, study rooms, laptops and much more.

Project

Linesheet Creator
- Improved the process of creation and publishing pdf generated linesheets to potential buyers in minutes.
- Developed the web application on React with template and layout based linesheets for product sellers with fully customizable editing and designing.

Restocare
- Developed and deployed a beta version of a web application for a small restaurant to better aid the customers and to manage their resources and inventory.
- Built the application on PHP with relational MySQL as the database.

Education

M.S. in Computer Science - Wichita State University, Wichita, Kansas.   May 2017

B.E. in Computer Science - B.V.B. College of Engineering and Technology, Hubli, India.   June 2014
